Web Based Drawing App

<i>Name</i>	<i>ID</i>
<i>Mariam Mohammed Ahmed</i>	<i>19017274</i>
<i>Yara Hossam Abdelaziz</i>	<i>19016871</i>
<i>Nourhan Ahmed Arafa</i>	<i>19016812</i>
<i>Nada Mohamed Ibrahim</i>	<i>19016782</i>

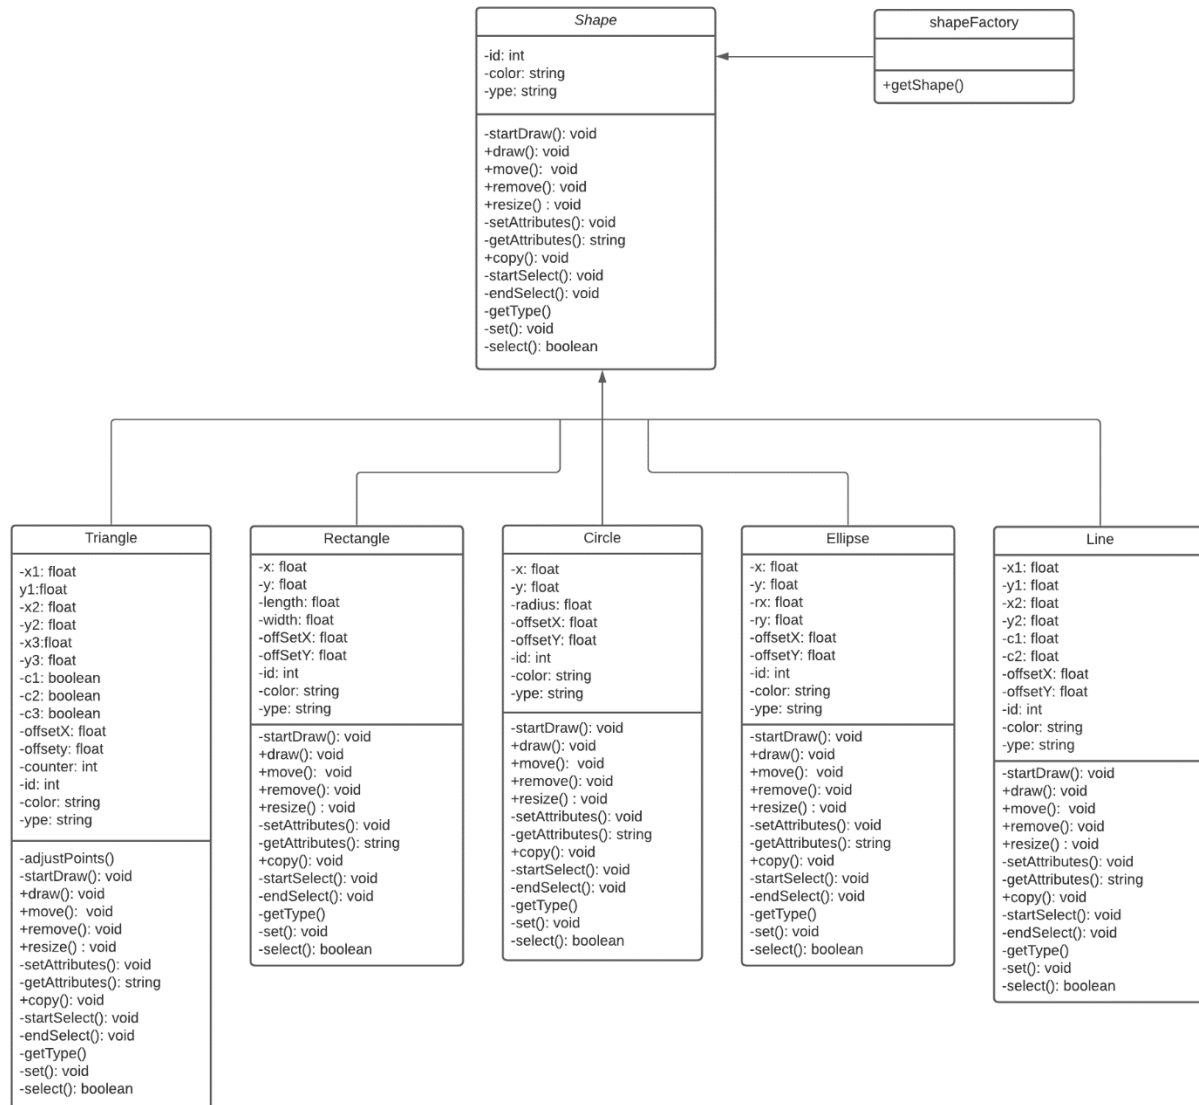

How to run the code

You need to import some packages, components, and decorators to run the program in a full phase.

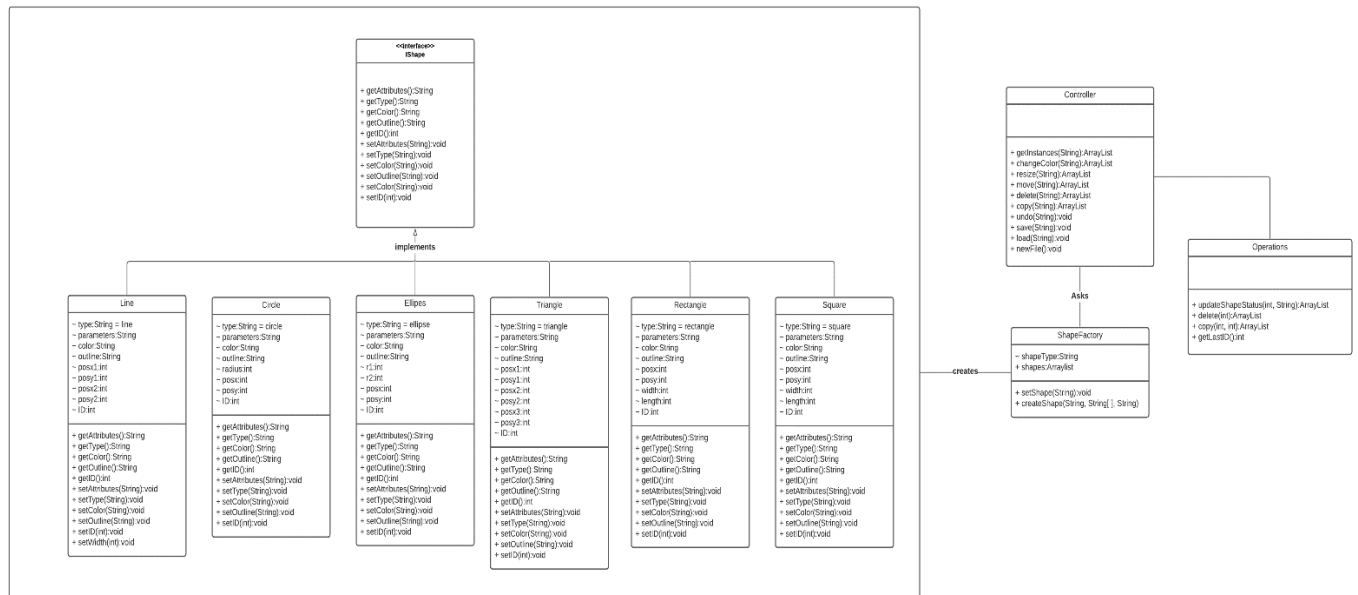

- Front-End
 - HttpClient: to allow sending requests to the server.
 - Renderer2: to allow operations on the svg element.
 - ViewChild: to look for the first element that matching the selector in the DOM.
 - ElementRef: to permit direct access to the DOM.
 - Injectable: to mark a class as available to be provided and injected as a dependency.
 - FormModule: to allow extracting inputs from forms.
- Back-End
 - java.util.ArrayList: to allow dealing with the objects in more familiar way than the array.
 - org.springframework.boot.SpringApplication
 - org.springframework.boot.autoconfigure.SpringBootApplication: to allow running spring application

UML Diagrams

- Factory Pattern in the Front End

● Factory Pattern in the Back End

Design Patterns

● For the Front-End

We used the factory pattern to allow producing new shapes which are independent from each other, each one with its own attributes and behaviors.

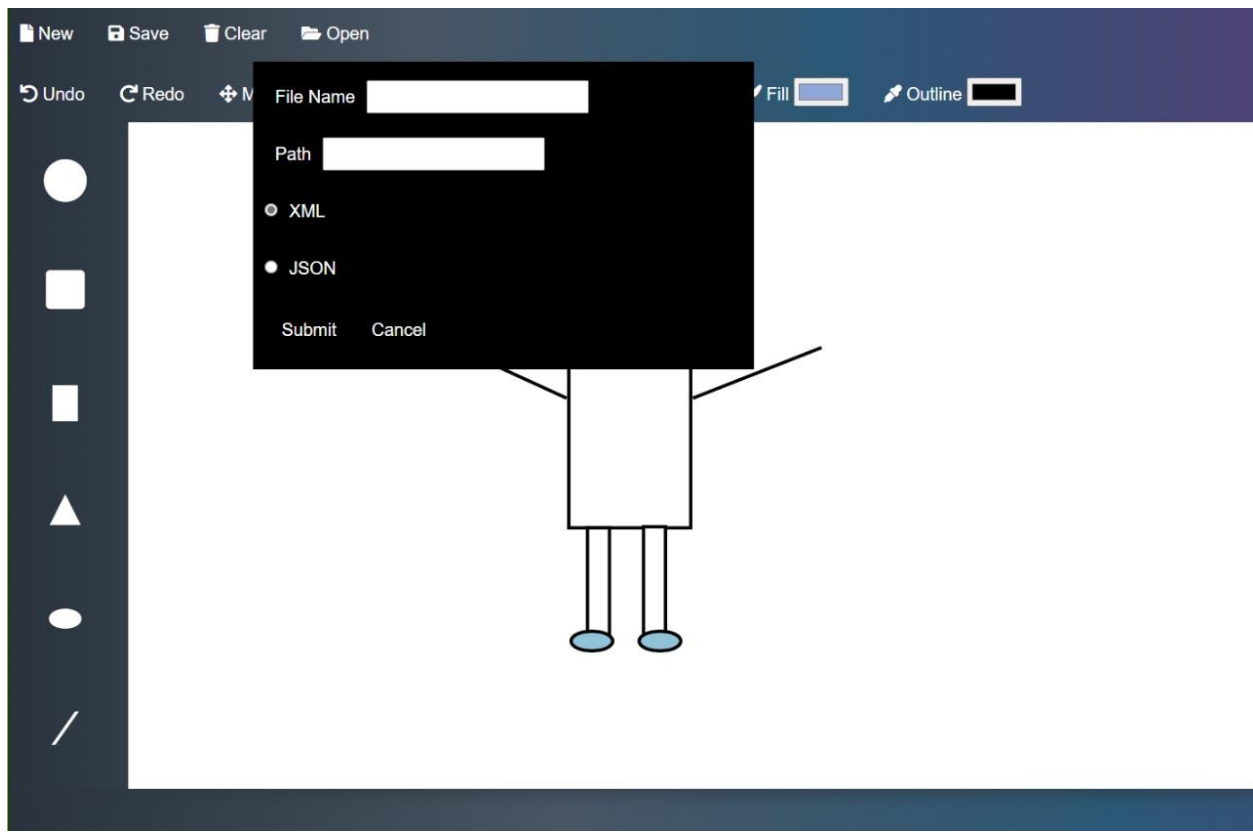

● For the Back-End

The factory pattern was used to create new shapes of different classes.

Design Decisions

- The triangle's resizing takes place at one point at a time.
- The triangle and the line can be selected from the terminal points only.
- When loading a file, undo/redo operations can be applied only to the new modified operations.

Snapshots of the UI

How-To-Use

- To Draw

You need to click on the icon of the shape to be drawn, then follow the next instructions:

- For all shapes except triangle
 - You need to select 2 points.
 - Select the first point on the board.
 - Drag and select the second point.
- Triangle
 - You need to select 3 points.
 - Select the first point on the board to start drawing
 - Move the line and select the second point.
 - Move the line and select the third point.

- For selecting a shape in the following operation, you need to click on any point on the shape to be selected except the triangle and the line you need to select a terminal point.
- To Move
 - Click on the move icon.
 - Move the required shape by dragging and dropping it.
- To Resize
 - Click on the resize icon
 - Drag the shape until reaching the required size.
- To Copy
 - Click on the copy icon
 - Select the required shape.
 - The copy will appear on the select shape.
- To Change the color

The following 2 operations are set together:

 - To change the fill color
 - Click on the fill icon.
 - Choose a color
 - Select a shape to change its color.
 - To change the border color
 - Click on the border icon
 - Choose a color
 - Select a shape to change its color.
- To create a new file
 - Press the icon new
- To Upload a file
 - Click on the open icon.
 - Enter the file name, the path.
 - Choose the file type either json or xml.
 - Press submit.

- To clear the board
 - Press the icon clear.
- To save a file
 - Click on the open icon.
 - Enter the file name and the path.
 - Choose the file type either json or xml.
 - Press submit
